PURPOSE OF THIS GUIDANCE

This guidance is intended to inform Local Authorities/LACORS (Local Authorities Coordinators of Regulatory Services) of the impact of the Biocidal Products Directive's, 2nd and 3rd Review Regulations, on the supply of biocidal products. This is relevant to Local Authorities in their role as an enforcing body for biocidal products under [the Biocidal Products Regulations 2001](#) (SI 2001 No. 880) ([as amended 2003](#)).

BACKGROUND

[The Biocidal Products Directive 98/8/EC \(BPD\)](#) is a Europe-wide directive that will ultimately regulate the supply of all biocidal products onto the EU market. Biocidal products are products used as disinfectants, preservatives, pest control products and other miscellaneous uses. A full list of the product types covered by the Directive is given in [Appendix 1](#). The products known in the UK as 'non-agricultural pesticides' will fall within the scope of the BPD and are currently regulated in the UK under the Control of Pesticides Regulations (COPR). These two sets of legislation (COPR and BPD) are currently running parallel to each other as we are in a transition period moving from national legislation to Europe-wide legislation.

Some products with biocidal effects are already covered by other legislation and these are excluded from the BPD – in particular those that are plant protection products or human or veterinary medicines.

Under BPD, there is an ongoing review of all existing active substances, (those used in biocidal products at the time BPD came into force in May 2000), to determine if they can be included in Annex I of the BPD. Annex I is a positive list of active substances, agreed at EU level that can be used in biocidal products.

The programme for this review of existing active substances is established by a series of Review Regulations. The first of these ([No 1896/2000](#)) required that industry either 'Identified' active substances used in biocidal products or 'Notified' their intention of supporting individual active substance through the review programme for possible inclusion on Annex I. The 2nd Review Regulation ([No 2032/2003](#)) lists the active substances that have been Identified and/or Notified, together with the product type in which they have been Notified. The 3rd Review Regulation ([No 1048/2005](#)) is an update to the 2nd Review Regulation noting any changes that have been made.

CONSEQUENCES OF THE 2ND AND 3RD REVIEW REGULATIONS.

The 2nd and 3rd Review Regulations give consequences for the continued supply of biocidal products. These are as follows:

- For neither Identified nor Notified active substances – biocidal products containing these had to come off the market by 14 December 2003.
- For only Identified active substances - biocidal products containing these have to be removed from the market by 1 September 2006.
- For Notified active substances - biocidal products containing these can remain on the market, in the product types for which the active substance has been Notified, until a decision on their inclusion on Annex I has been taken.
- For Notified active substances where no dossier/data package was submitted when required for review (and no one took over the role of the participant) – biocidal products containing them have to be removed from the market by the following dates
 - ❖ **1 September 2006** – If the active substance was notified for review in the first priority list.
 - ❖ **31 December 2007** - If the active substance was notified for review in the second priority list.
 - ❖ The date for removing products containing active substances where no dossier/data package was submitted for the third and fourth priority list has yet to be set.

Details of the product types in each priority list are given in [Appendix 2](#).

IMPACT

Numbers of biocidal active substances that have been Identified and Notified

Approximately 360 active substances have been Notified and will be included in the Review Programme. Biocidal products containing them can stay on the market, in the product types for which the Notification has been made, until a decision on the Annex I inclusion has been taken.

Approximately 600 active substances have been only Identified. Biocidal products containing these active substances can no longer be placed on the market after 1 September 2006. This also applies to products where the active substances that were notified but not in relevant Product Type.

It is not possible to determine the number of active substances that were not at least Identified, as the majority of product types under the Directive do not fall under any existing authorisation scheme in the UK. For those that do fall under an existing national scheme, for example products that were subject to the Control of Pesticides Regulations (COPR) virtually all active substances were Identified.

Impact for Local Authorities

Local Authorities/local Weights and Measures authorities have enforcement responsibilities for biocidal products as outlined in [the Biocidal Products Regulations 2001](#) (SI 2001 No. 880). In relation to the 2nd and 3rd Review Regulations this will mainly relate to the advertisement and sale of biocidal products that officers encounter in the course of their normal duties. Enquiries may also be received from members of the public and industry about the sale and advertisement of specific products. The Health and Safety Executive's Biocides & Pesticides Unit, which carries out the UK Competent Authority functions for the Directive, can provide further advice and information where required.

Summary of Main Points

1. A number of active substances that were used in biocidal products before 2000 are no longer allowed for use in such products, as these active substances were neither Identified nor Notified. Products containing such substances had to be removed from the market by 14 December 2003.
2. Biocidal products containing active substances that have only been Identified (or Notified but not for the relevant product type) have to be removed from the market by 1 September 2006. A list of non-agricultural pesticides approved under the UK's Control of Pesticides Regulations that have to be removed from the market by 1 September 2006 can be found in [Appendix 3](#) but please note that this only covers non-agricultural pesticides – most products affected by the Directive (for example disinfectants) are not covered by existing national schemes such as COPR, so there are not lists available of individual products affected.
3. Products containing active substances that have been Notified in the relevant product type can continue to be marketed until they are reviewed under the Directive and a decision is made on them at the EU level. If a dossier/data package is not submitted by the deadline specified in the 2nd Review Regulation, biocidal products that contain them have to be removed from the market by 1 September 2006, 31 December 2007 or a date yet to be confirmed, depending on the product type.
4. Local authorities may be required to carry out enforcement action against products that contain non-Identified/Notified active substances that are being marketed after the relevant date.
5. If you are unsure whether a biocidal product should or should not be on the market, please contact the HSE's Biocides & Pesticides Unit at the address below. If you have details of the active substance in the product – such as its chemical name and CAS number – then it will normally be fairly straightforward for HSE to check the review regulations and give you appropriate advice.

It is also available on the Official Journal website at <http://ecb.jrc.it/Legislation/2005R1048EC.pdf>

APPENDIX 1 - BIOCIDAL PRODUCT TYPES AND THEIR DESCRIPTIONS AS REFERRED TO IN ARTICLE 2(1)(A) OF THE BIOCIDAL PRODUCTS DIRECTIVE

These product-types exclude products where they are covered by the Directives mentioned in article 1(2) of the BPD for the purpose of those Directives. For example, Article 1(2) includes directives relating to veterinary medicinal products, human medicinal products and plant protection products, amongst others.

MAIN GROUP 1 : Disinfectants and general biocidal products	
These product types exclude cleaning products that are not intended to have a biocidal effect, including washing liquids, powders and similar products.	
Product-type 1: Human hygiene biocidal products	Products in this group are biocidal products used for human hygiene purposes.
Product-type 2: Private areas and public health area disinfectants and other biocidal products	Products used for the disinfection of air, surfaces, materials, equipment and furniture which are not used for direct food or feed contact in private, public and industrial areas, including hospitals, as well as products used as algacides. Usage areas include, <i>inter alia</i> , swimming pools, aquariums, bathing and other waters; air-conditioning systems; walls and floors in health and other institutions; chemical toilets, waste water, hospital waste, soil or other substrates (in playgrounds).
Product-type 3: Veterinary hygiene biocidal products	Products in this group are biocidal products used for veterinary hygiene purposes including products used in areas in which animals are housed, kept or transported.
Product-type 4: Food and feed area disinfectants	Products used for the disinfection of equipment, containers, consumption utensils, surfaces or pipework associated with the production, transport, storage or consumption of food, feed or drink (including drinking water) for humans and animals.
Product-type 5: Drinking water disinfectants	Products used for the disinfection of drinking water (for both humans and animals)
MAIN GROUP 2: PRESERVATIVES	
Product-type 6: In-can preservatives	Products used for the preservation of manufactured products, other than foodstuffs or feeding stuffs, in containers by the control of microbial deterioration to ensure their shelf life.
Product-type 7: Film preservatives	Products used for the preservation of films or coatings by the control of microbial deterioration in order to protect the initial properties of the surface of materials or objects such as paints, plastics, sealants, wall adhesives, binders, papers, art works.
Product-type 8: Wood preservatives	Products used for the preservation of wood from and including the saw-mill stage, or wood products by the control of wood-destroying or wood-disfiguring organisms. This product type includes both preventive and curative products.

Product-type 9: Fibre, leather, rubber and polymerised materials preservatives	Products used for the preservation of fibrous or polymerised material such as leather, rubber or paper or textile products and rubber by the control of microbial deterioration.
Product-type 10: Masonry preservatives	Products used for the preservation and remedial treatment of masonry or other construction materials other than wood by the control of microbiological and algal attack.
Product-type 11: Preservatives for liquid-cooling and processing systems	Products used for the preservation of water or other liquids used in cooling and processing systems by the control of harmful organisms such as microbes, algae and mussels. Products used for the preservation of drinking water are not included in this product type.
Product-type 12: Slimicides	Products used for the prevention of control of slime growth on materials, equipment and structures, used in industrial processes, e.g. on wood and paper pulp, porous sand strata in oil extraction.
Product-type 13: Metalworking-fluid preservatives	Products used for the preservation of metalworking fluids by the control of microbial deterioration.
MAIN GROUP 3: Pest Control	
Product-type 14: Rodenticides	Products for the control of mice, rats or other rodents.
Product-type 15: Avicides	Products used for the control of birds.
Product-type 16: Molluscicides	Products used for the control of molluscs.
Product-type 17: Piscicides	Products used for the control of fish; these products exclude products used for the treatment of fish diseases.
Product-type 18: Insecticides, acaricides and products to control other arthropods	Products used for the control of arthropods (e.g. insects, arachnids and crustaceans).
Product-type 19: Repellents and attractants	Products used to control harmful organisms (invertebrates such as fleas, vertebrates such as birds), by repelling or attracting, including those that are use for human or veterinary hygiene either directly or indirectly.
MAIN GROUP 4: Other biocidal products	
Product-type 20: Preservatives for food or feedstocks	Products used for the preservation of food or feedstocks by the control of harmful organisms.
Product-type 21: Antifouling products	Products used to control the growth and settlement of fouling organisms (microbes and higher forms of plant or animal species) on vessels, aquaculture equipment or other structures used in water.
Product-type 22: Embalming and taxidermist fluids	Products used for the disinfection and preservation of human or animal corpses, or parts thereof.
Product-type 23: Control of other vertebrates	Products used for the control of vermin.

APPENDIX 2 – DATES FOR REMOVING PRODUCTS CONTAINING NOTIFIED ACTIVE SUBSTANCES WHERE NO DOSSIER/DATA PACKAGE WAS SUBMITTED.

Priority Lists	Date Products have to Removed from the Market	Product Types
First	1 September 2006	08 Wood Preservatives 14 Rodenticides
Second	31 December 2007	16 Molluscicides 18 Insecticides, acaricides and products to control other arthropods 19 Repellents and attractants 21 Antifouling products
Third	To Be Confirmed	01 Human hygiene biocidal products 02 Private area and public health area disinfectants and other biocidal products 03 Veterinary hygiene biocidal products 04 Food and feed area disinfectants 05 Drinking water disinfectants 06 In-can preservatives 13 Metalworking-fluid preservatives
Fourth	To Be Confirmed	07 Film preservatives 09 Fibre, leather, rubber and polymerised materials preservatives 10 Masonry preservatives 11 Preservatives for liquid-cooling and processing systems 12 Slimicides 15 Avicides 17 Piscicides 20 Preservatives for food or feedstocks 22 Embalming and taxidermist fluids 23 Control of other vertebrates

APPENDIX 3 – LIST OF BIOCIDAL PRODUCTS APPROVED UNDER THE CONTROL OF PESTICIDES REGULATIONS (COPR) THAT HAVE HAD THEIR APPROVAL VOID.

Check the active substance on the product label with what is listed below. Some products are in the process of being reformulated to replace Identified active substances with active substances that have been Notified for review, but products will retain the same product name and HSE number. Therefore you need to check the active substance details on the label and if they match the details on this list the product should have been removed from the market by 1 September 2006.

If it is unclear what the approval status of the product is please contact HSE for advice.
