Manual cleaning of presses (cold-set inks)

COSHH essentials for printers

This information is intended to help employers in the printing industry comply with the requirements of the Control of Substances Hazardous to Health Regulations 2002 (COSHH), as amended, to control exposure to chemicals and protect workers' health.

It is also useful for trade union safety representatives.

This sheet describes good practice for manual cleaning of presses using cold-set inks, and blanket rejuvenation with cleaning chemicals such as solvent naphtha.

It is important to follow all the points or use equally effective measures.

Main points

- Dermatitis is common in printing. This is caused by frequent contact with chemicals used in printing processes.
- Minimise skin contact with inks, reducers and cleaning chemicals.
- Manual cleaning increases the risks of skin exposure. Consider introducing automatic systems.
- Solvent-based cleaners (eg solvent naphtha) can be absorbed through the skin.

Access and premises

- Only allow authorised staff access to the press room.
- Provide good facilities for washing, skin care, and for taking refreshments.

Equipment

- Can you use cleaning products with lower volatility/higher flashpoint?
- Can you use a wiping tool in place of rags or cloths? Minimise hand wiping.
- Provide a good standard of general ventilation. Use powered wall- or window-mounted fans to supply fresh air - five to ten air changes per hour, with a through draught.

General ventilation for cleaning a printing press

- If extraction is fitted to the press, turn it on for cleaning. The press should be stationary.
- Provide chemical-resistant gloves.
- Provide a good through draught with a fan or air mover for work in restricted areas, eg removing ink from cylinders, work in dead spaces between machines.
- Provide fire-resisting, metal cabinets for flammable liquid storage in the press area.

Special care

- Avoid blanket rejuvenation products based on dichloromethane (methylene chloride). This is extremely volatile.
Maintenance, examination and testing
✓ Follow the instructions in the maintenance manual - keep equipment in effective and efficient working order.
✓ Noisy or vibrating fans indicate a problem. Do repairs as necessary.

Personal protective equipment (PPE)
✓ Provide storage for PPE to prevent damage or contamination when not in use.

Respiratory protective equipment (RPE)
✓ Respiratory protective equipment should not be needed for routine use.

Gloves
✓ Use chemical resistant gloves - nitrile gloves 0.4 mm thick are acceptable. Typically, these are suitable for use with lower-volatility solvents, for no more than eight hours.
✓ Ensure that workers wear them.
✓ Ensure workers remove and discard damaged gloves.

Other protective equipment
✓ Eye protection.
✓ Impervious apron.
✓ Anti-static footwear.
✓ Cotton overalls to minimise clothing contamination.
✓ Change contaminated overalls immediately and ensure they are laundered before reuse.

Skin management
✓ Skin contact with the chemicals may cause dermatitis.

Skin care
✓ Keep hands clean and in good condition.
✓ Using pre-work creams helps make removing chemicals easier. However, pre-work creams should not be seen as a substitute for gloves.
✓ If you need to use hand cleansers to remove ink, ensure that the cleanser is rinsed off afterwards.
✓ Provide after-work creams (moisturisers) to replace skin oils.
✓ Never allow solvents to be used for cleaning skin.

Skin surveillance/checks
✓ Consider seeking advice from an occupational health professional.
✓ Appoint a responsible person to carry out periodic skin inspections and record the findings.

Cleaning and housekeeping
✓ Keep the work area tidy, clean and free of combustible materials.
✓ Clean the workroom at least once a week.
✓ Store contaminated cloths, wipes and gloves in fire-resisting, closed, metal containers. Dispose of them as hazardous waste.
Store containers in a safe place, securely closed.
Minimise the amount of flammable liquids in use. Use a self-sealing container or proprietary dispenser.
Clean up spills immediately. Use an impervious apron and new nitrile gloves 0.4 mm thick. Throw away gloves once used.
Use a contract laundry or a suitable equivalent to wash work clothing. Don't do this at home.
Dispose of waste solvent, ink and empty containers as hazardous waste.
Handle containers with care and replace caps.
Control panels also require cleaning.

**Training and supervision**

Working in the right way is important for exposure control. Train and supervise workers - see details in sheet P0.

**Environmental guidelines**

Releases into the air may be regulated within the Pollution Prevention and Control (PPC) framework. Your local authority or the Environment Agency will tell you if PPC applies to your company, and give advice on air cleaning and discharging emissions. In Scotland, consult the Scottish Environment Protection Agency (SEPA). For more information, see http://www.environment-agency.gov.uk/netregs/sectors/.

This guidance is issued by the Health and Safety Executive. Following the guidance is not compulsory and you are free to take other action. But if you do follow the guidance you will normally be doing enough to comply with the law. Health and safety inspectors seek to secure compliance with the law and may refer to this guidance as illustrating good practice.
