Printing with heat-set inks

COSHH essentials for printers

This information is intended to help employers in the printing industry comply with the requirements of the Control of Substances Hazardous to Health Regulations 2002 (COSHH), as amended, to control exposure to chemicals and protect workers' health.

It is also useful for trade union safety representatives.

This sheet describes good practice for heat-set printing. Use extraction for solvent vapour.

It is important to follow all the points or use equally effective measures.

Main points
■ Dermatitis is common in printing. This is caused by frequent contact with chemicals used in printing processes.
■ Minimise skin contact with inks, reducers and cleaning chemicals.

Lithographic printing

Access and premises
✓ Only allow authorised staff access to the press room.
✓ Provide good facilities for washing, skin care, and for taking refreshments.

Equipment
✓ Provide a good standard of general ventilation. Use powered wall- or window-mounted fans to supply fresh air - five to ten air changes per hour, with a through draught.
✓ To reduce ink mist, you need an airflow between 1 and 2.5 metres per second into print unit openings.
✓ You need an airflow between 0.5 and 1 metre per second into the dryer.
✓ Fit a manometer, pressure gauge or tell-tale to show that extraction is working.
✓ Discharge extracted air to a safe place in the open air, away from doors, windows and air inlets.

Maintenance, examination and testing
✓ Follow the instructions in the maintenance manual - keep equipment in effective and efficient working order.
✓ Noisy or vibrating fans indicate a problem. Do repairs as necessary.
✓ If the machine extraction stops, or is faulty, get it repaired straightaway.
✓ Don't alter, add or remove extraction without specialist advice.
✓ Check transfer hoses and connectors regularly for leaks.
✓ At least once a week, check that the extraction system and gauges work properly.
✓ You need to know the manufacturer’s performance specifications to know if extraction is working properly.
✓ If this information isn’t available, hire a competent ventilation engineer to determine the performance needed for effective control.
✓ The engineer’s report must show the target extraction rates.
✓ Keep this information in your testing logbook.
✓ Get a competent ventilation engineer to examine the extraction thoroughly and test its performance at least once every 14 months - see HSE publication HSG54.
✓ Keep records of all examinations and tests for at least five years.

**Personal protective equipment (PPE)**

**Respiratory protective equipment (RPE)**
✓ Respiratory protective equipment should not be needed for routine use.

**Gloves**
✓ Gloves are not needed for routine use.

**Skin management**
✓ Skin contact with the chemicals may cause dermatitis.

**Skin care**
✓ Keep hands clean and in good condition.
✓ Using pre-work creams helps make removing chemicals easier. However, pre-work creams should not be seen as a substitute for gloves.
✓ If you need to use hand cleansers to remove ink, ensure that the cleanser is rinsed off afterwards.
✓ Provide after-work creams (moisturisers) to replace skin oils.
✓ Never allow solvents to be used for cleaning skin.

**Skin surveillance/checks**
✓ Consider seeking advice from an occupational health professional.
✓ Appoint a responsible person to carry out periodic skin inspections and record the findings.

**Cleaning and housekeeping**
✓ Keep the work area tidy, clean and free of combustible materials.
✓ Clean the workroom at least once a week.
✓ Store contaminated cloths, wipes and gloves in fire-resisting, closed, metal containers. Dispose of them as hazardous waste.
✓ Store containers in a safe place, securely closed.
✓ Use a contract laundry or a suitable equivalent to wash work clothing. Don’t do this at home.
✓ Clean up spills immediately. Use an impervious apron and new nitrile gloves 0.4 mm thick. Throw away gloves once used.
✓ Dispose of waste solvent, ink and empty containers as hazardous waste.
✓ Handle containers with care and replace caps.
Training and supervision

✓ Working in the right way is important for exposure control. Train and supervise workers - see details in sheet P0.

Environmental guidelines

Releases into the air may be regulated within the Pollution Prevention and Control (PPC) framework. Your local authority or the Environment Agency will tell you if PPC applies to your company, and give advice on air cleaning and discharging emissions. In Scotland, consult the Scottish Environment Protection Agency (SEPA). For more information, see http://www.environment-agency.gov.uk/netregs/sectors/.

Useful links

Contact the British Occupational Hygiene Society (BOHS) on 01332 298101 or at www.bohs.org/ for lists of qualified hygienists who can help you.

Look in Yellow Pages under 'Health and safety consultants' and 'Health authorities and services' for occupational physicians (doctors and nurses). Also see www.nhsplus.nhs.uk/.

Employee checklist

☐ Is the workroom ventilation switched on and working properly?
☐ Is the machine extraction switched on and working properly?
☐ Look for signs of wear and damage.
☐ If you find any problems, tell your supervisor or safety/employee representative. Don't just carry on working.
☐ Never use solvents to clean your hands - only use proprietary skin cleansers.
☐ Use skin creams provided, as instructed.
☐ Check your skin regularly for dryness or soreness - tell your supervisor if these appear.
☐ Wash your hands before eating and drinking and before you leave work.
☐ Don't smoke in the work area.

This guidance is issued by the Health and Safety Executive. Following the guidance is not compulsory and you are free to take other action. But if you do follow the guidance you will normally be doing enough to comply with the law. Health and safety inspectors seek to secure compliance with the law and may refer to this guidance as illustrating good practice.
