Automated cleaning of presses (heat-set inks)

Lithographic printing

Access and premises

✓ Only allow authorised staff access to the press room.
✓ Provide good facilities for washing, skin care, and for taking refreshments.

Equipment

✓ Can you use cleaning products with lower volatility/higher flashpoint?
✓ Provide splash-resistant gloves.
✓ Provide a good standard of general ventilation. Use powered wall- or window-mounted fans to supply fresh air - five to ten air changes per hour, with a through draught.

Main points

■ Dermatitis is common in printing. This is caused by frequent contact with chemicals used in printing processes.
■ Minimise skin contact with inks, reducers and cleaning chemicals.
■ Solvent-based cleaners (eg solvent naphtha) can be absorbed through the skin.

Use closed pump transfer for cleaning solvents.
✓ If extraction is fitted to the press, turn it on for cleaning. The press should be stationary.
✓ Ensure the quantity of cleaning chemicals applied by the automatic blanket wash system is metered to the minimum necessary and is altered only as authorised.
✓ Provide fire-resisting, metal cabinets for flammable liquid storage in the press area.
**Maintenance, examination and testing**

- Follow the instructions in the maintenance manual - keep equipment in effective and efficient working order.
- Noisy or vibrating fans indicate a problem. Do repairs as necessary.
- Check transfer hoses and connectors regularly for leaks.

**Personal protective equipment (PPE)**

- Provide storage for PPE to prevent damage or contamination when not in use.

**Respiratory protective equipment (RPE)**

- Respiratory protective equipment should not be needed for routine use.

**Gloves**

- Use splash-resistant gloves where there is a risk of skin contact - single-use nitrile gloves 0.2 mm thick are acceptable.
- Tell workers to dispose of single-use gloves every time they take them off.

**Skin management**

- Skin contact with the chemicals may cause dermatitis.

**Skin care**

- Keep hands clean and in good condition.
- Using pre-work creams helps make removing chemicals easier. However, pre-work creams should not be seen as a substitute for gloves.
- If you need to use hand cleansers to remove ink, ensure that the cleanser is rinsed off afterwards.
- Provide after-work creams (moisturisers) to replace skin oils.
- Never allow solvents to be used for cleaning skin.

**Skin surveillance/checks**

- Consider seeking advice from an occupational health professional.
- Appoint a responsible person to carry out periodic skin inspections and record the findings.

**Cleaning and housekeeping**

- Keep the work area tidy, clean and free of combustible materials.
- Clean up spills immediately. Use an impervious apron and new nitrile gloves 0.4 mm thick. Throw away gloves once used.
- Store contaminated cloths, wipes and gloves in fire-resisting, closed, metal containers. Dispose of them as hazardous waste.
- Dispose of waste solvent, inks and empty containers as hazardous waste.
- Clean the workroom at least once a week.
- Minimise the amount of flammable liquids in use. Use a self-sealing container or proprietary dispenser.
- Use a contract laundry or a suitable equivalent to wash work clothing. Don’t do this at home.
- Handle containers with care and replace caps.
Training and supervision

✓ Working in the right way is important for exposure control. Train and supervise workers - see details in sheet P0.

Environmental guidelines

Releases into the air may be regulated within the Pollution Prevention and Control (PPC) framework. Your local authority or the Environment Agency will tell you if PPC applies to your company, and give advice on air cleaning and discharging emissions. In Scotland, consult the Scottish Environment Protection Agency (SEPA). Dispose of hazardous wastes safely. For more information, see http://www.environment-agency.gov.uk/netregs/sectors/.

and nurses). Also see www.nhsplus.nhs.uk/.

Employee checklist

☐ Is the workroom ventilation switched on and working properly?

☐ Look for signs of wear and damage.

☐ If you find any problems, tell your supervisor or
  safety/employee representative. Don't just carry on working.

☐ Wear your protective equipment as directed.

☐ Throw away single-use gloves every time you take
  them off.

☐ Don't use damaged gloves.

☐ Remember that gloves increase the risk of
  entanglement with rollers and cylinders.

☐ Never use solvents to clean your hands - only use
  proprietary skin cleansers.

☐ Use skin creams provided, as instructed.

☐ Check your skin regularly for dryness or soreness - tell
  your supervisor if these appear.

☐ Wash your hands before eating and drinking and
  before you leave work.

☐ Don't smoke in the work area.

This guidance is issued by the Health and Safety Executive. Following
the guidance is not compulsory and you are free to take other action.
But if you do follow the guidance you will normally be doing enough to
comply with the law. Health and safety inspectors seek to secure
compliance with the law and may refer to this guidance as illustrating
good practice.
