Printing with higher-volatility inks and extracted rack drying

COSHH essentials for printers

This information is intended to help employers in the printing industry comply with the requirements of the Control of Substances Hazardous to Health Regulations 2002 (COSHH), as amended, to control exposure to chemicals and protect workers' health.

It is also useful for trade union safety representatives.

This sheet describes good practice for using higher-volatility inks with a minimum boiling point below 150°C, and for all longer print runs. Use extraction on the rack drier.

It is important to follow all the points or use equally effective measures.

Main points

- Dermatitis is common in printing. This is caused by frequent contact with the chemicals used in printing processes.
- Minimise skin contact with inks and cleaning chemicals.

Screen printing

Access and premises

✓ Only allow authorised staff access to the print room.
✓ Provide good facilities for washing, skin care, and for taking refreshments.

Equipment

✓ Provide a good standard of general ventilation. Use powered wall- or window-mounted fans to supply fresh air - five to ten air changes per hour, with a through draught.
✓ Provide splash-resistant gloves.
✓ Position the drying rack inside an extracted booth - see illustration.
✓ Locate the booth away from doors, windows and walkways. Draughts may interfere with the extraction.
✓ You need an airflow between 0.5 and 1 metre per second into the booth.
✓ Keep extraction ducts short and simple, and solvent- and fire-resistant.
✓ Fit a manometer, pressure gauge or tell-tale to show that extraction is working.
✓ Discharge extracted air to a safe place in the open air, away from doors, windows and air inlets.

Special care

✓ Check the safety data sheet - avoid products labelled R60 (may impair fertility), R61 (may cause harm to the unborn child), or R40 (limited evidence of a carcinogenic effect).

Maintenance, examination and testing

✓ Follow the instructions in the maintenance manual - keep equipment in effective and efficient working order.
✓ If the machine extraction stops, or is faulty, get it repaired straight away.
✓ Don’t alter, add or remove extraction without specialist advice.
✓ Noisy or vibrating fans indicate a problem. Do repairs as necessary.
✓ At least once a week, check that the extraction system and gauges work properly.
✓ You need to know the manufacturer’s performance specifications to know if extraction is working properly.
✓ If this information isn’t available, hire a competent ventilation engineer to determine the performance needed for effective control.
✓ The engineer’s report must show the target extraction rates.
✓ Keep this information in your testing logbook.
✓ Get a competent ventilation engineer to examine the extraction thoroughly and test its performance at least once every 14 months - see HSE publication HSG54.
✓ Keep records of all examinations and tests for at least five years.

**Personal protective equipment (PPE)**
✓ Provide storage for PPE to prevent damage or contamination when not in use.

**Respiratory protective equipment (RPE)**
✓ Respiratory protective equipment should not be needed for routine use.

**Gloves**
✓ Use splash-resistant gloves where there is a risk of skin contact - single-use nitrile gloves 0.2 mm thick are acceptable.
✓ Tell workers to dispose of single-use gloves every time they take them off.

**Skin management**
✓ Skin contact with the chemicals may cause dermatitis.

**Skin care**
✓ Keep hands clean and in good condition.
✓ Using pre-work creams helps make removing chemicals easier. However, pre-work creams should not be seen as a substitute for gloves.
✓ If you need to use hand cleansers to remove ink, ensure that the cleanser is rinsed off afterwards.
✓ Provide after-work creams (moisturisers) to replace skin oils.
✓ Never allow solvents to be used for cleaning skin.

**Skin surveillance/checks**
✓ Consider seeking advice from an occupational health professional.
✓ Appoint a responsible person to carry out periodic skin inspections and record the findings.

**Cleaning and housekeeping**
✓ Keep the work area tidy, clean and free of combustible materials.
✓ Clean the workroom at least once a week.
✓ Store containers in a safe place, securely closed.
✓ Handle containers with care and replace caps. Wipe off any liquid on the outside of the container.
Clean up spills immediately. Use new nitrile gloves 0.4 mm thick. Throw away gloves once used.

Store contaminated cloths, wipes and gloves in fire-resisting, closed, metal containers. Dispose of them as hazardous waste.

Dispose of waste solvent, ink and empty containers as hazardous waste.

Use a contract laundry or a suitable equivalent to wash work clothing. Don’t do this at home.

Training and supervision

Working in the right way is important for exposure control. Train and supervise workers - see details in sheet P0.

Environmental guidelines

Releases into the air may be regulated within the Pollution Prevention and Control (PPC) framework. Your local authority or the Environment Agency will tell you if PPC applies to your company, and give advice on air cleaning and discharging emissions. In Scotland, consult the Scottish Environment Protection Agency (SEPA). For more information, see http://www.environment-agency.gov.uk/netregs/sectors/.

Useful links

Contact the British Occupational Hygiene Society (BOHS) on 01332 298101 or at www.bohs.org/ for lists of qualified hygienists who can help you.

Look in Yellow Pages under ‘Health and safety consultants’ and ‘Health authorities and services’ for occupational physicians (doctors and nurses). Also see www.nhsplus.nhs.uk/.

This guidance is issued by the Health and Safety Executive. Following the guidance is not compulsory and you are free to take other action. But if you do follow the guidance you will normally be doing enough to comply with the law. Health and safety inspectors seek to secure compliance with the law and may refer to this guidance as illustrating good practice.
