This information is intended to help employers in the printing industry comply with the requirements of the Control of Substances Hazardous to Health Regulations 2002 (COSHH), as amended, to control exposure to chemicals and protect workers' health.

It is also useful for trade union safety representatives.

This sheet provides good practice for automated screen cleaning in an enclosed extracted washer.

It is important to follow all the points or use equally effective measures.

Main points

- Dermatitis is common in printing. This is caused by frequent contact with chemicals used in printing processes.
- Minimise skin contact with inks and cleaning chemicals.
- Electrical equipment must be designed to work safely in a wet environment.

Screen printing

Access and premises

✔ Only allow authorised staff access to the cleaning area.
✔ Provide good facilities for washing, skin care, and for taking refreshments.

Equipment

✔ Use water-based products wherever possible.
✔ Provide a good standard of general ventilation. Use powered wall- or window-mounted fans to supply fresh air - five to ten air changes per hour, with a through draught.
✔ Provide chemical-resistant gloves.

✔ Enclose the washer as much as possible - see illustration.
✔ Ensure the washer doors are interlocked with the cleaning cycle, which should include time for drying.
✔ Cleaned screens should be safe to handle. The cleaning cycle must allow enough time for draining, drying and solvent clearance.
✔ You need an airflow between 0.5 and 1 metre per second into the washer openings.
✔ Fit a manometer, pressure gauge or tell-tale to show that the extraction is working.
Discharge extracted air to a safe place in the open air, away from doors, windows and air inlets.
Keep spent solvent and ink residues out of the sewage system.

Special care
✓ Skin contact with UV-curable inks can cause dermatitis.
✓ Check that there are no ‘confined spaces’, eg sludge pit. If there are, create ‘permit to work’ safety procedures for entry.

Maintenance, examination and testing
✓ Follow the instructions in the maintenance manual - keep equipment in effective and efficient working order.
✓ If the machine extraction stops, or is faulty, get it repaired straightaway.
✓ Don’t alter, add or remove extraction without specialist advice.
✓ Noisy or vibrating fans indicate a problem. Do repairs as necessary.
✓ At least once a week, check that the extraction system and gauges work properly.
✓ You need to know the manufacturer’s performance specifications to know if extraction is working properly.
✓ If this information isn’t available, hire a competent ventilation engineer to determine the performance needed for effective control.
✓ The engineer’s report must show the target extraction rates.
✓ Keep this information in your testing logbook.
✓ Get a competent ventilation engineer to examine the extraction thoroughly and test its performance at least once every 14 months - see HSE publication HSG54.
✓ Keep records of all examinations and tests for at least five years.
✓ Check transfer hoses and connectors regularly for leaks.
✓ Don’t enter the washer until it is safe - check the solvent and oxygen levels.
✓ Visually check compressed airlines for damage before use.
✓ Ensure users examine their RPE thoroughly and test that it works properly every time they use it.
✓ Check the airflow and air quality (BS 4275) for air-fed RPE at least once every three months.

Personal protective equipment (PPE)
✓ Provide storage for PPE to prevent damage or contamination when not in use.

Respiratory protective equipment (RPE)
✓ Respiratory protective equipment should not be needed for routine use.
✓ If you need to enter the washer or sump, use supplied-air RPE (breathing apparatus). See sheet P50.

Gloves
✓ Use chemical resistant gloves – nitrile gloves 0.4 mm thick are acceptable. These are suitable for splash protection only, for no more than 30 minutes.
✓ Ensure that workers wear them.
✓ Avoid wiping screens by hand.
✓ Ensure workers remove and discard damaged gloves.
Other protective equipment
✓ Eye protection.
✓ Waterproof footwear.
✓ Cotton overalls to minimise clothing contamination.
✓ Change contaminated overalls immediately and ensure they are laundered before reuse.

Skin management
✓ Skin contact with the chemicals may cause dermatitis.

Skin care
✓ Keep hands clean and in good condition.
✓ Using pre-work creams helps make removing chemicals easier. However, pre-work creams should not be seen as a substitute for gloves.
✓ If you need to use hand cleansers to remove ink, ensure that the cleanser is rinsed off afterwards.
✓ Provide after-work creams (moisturisers) to replace skin oils.
✓ Never allow solvents to be used for cleaning skin.

Skin surveillance/checks
✓ Consider seeking advice from an occupational health professional.
✓ Appoint a responsible person to carry out periodic skin inspections and record the findings.

Cleaning and housekeeping
✓ Clean the workroom at least once a week.
✓ Clean up spills immediately. Use new nitrile gloves 0.4 mm thick. Throw away gloves once used.
✓ Keep inks, solvents and solid wastes out of the drains.
✓ Store contaminated cloths, wipes and gloves in fire-resisting, closed, metal containers. Dispose of them as hazardous waste.
✓ Dispose of waste solvent, ink and empty containers as hazardous waste.
✓ Use a contract laundry or a suitable equivalent to wash work clothing. Don’t do this at home.

Training and supervision
✓ Working in the right way is important for exposure control. Train and supervise workers - see details in sheet P0.

Environmental guidelines
Releases into the air may be regulated within the Pollution Prevention and Control (PPC) framework. Your local authority or the Environment Agency will tell you if PPC applies to your company, and give advice on air cleaning and discharging emissions. In Scotland, consult the Scottish Environment Protection Agency (SEPA). For more information, see http://www.environment-agency.gov.uk/netregs/sectors/.

‘Health authorities and services’ for occupational physicians (doctors
and nurses). Also see www.nhsplus.nhs.uk/.

Employee checklist

☐ Is the workroom ventilation switched on and working properly?
☐ Is the machine extraction switched on and working properly?
☐ Look for signs of wear and damage.
☐ If you find any problems, tell your supervisor or
  safety/employee representative. Don't just carry on working.
☐ Wear your protective equipment as directed.
☐ Check your respiratory protective equipment works properly every time you use it.
☐ Throw away protective gloves at the end of the job.
☐ Don’t use damaged gloves.
☐ Never use solvents to clean your hands - only use proprietary skin cleansers.
☐ Use skin creams provided, as instructed.
☐ Check your skin regularly for dryness or soreness - tell your supervisor if these appear.
☐ Wash your hands before eating and drinking and before you leave work.
☐ Don't smoke in the work area.

This guidance is issued by the Health and Safety Executive. Following
the guidance is not compulsory and you are free to take other action.
But if you do follow the guidance you will normally be doing enough to
comply with the law. Health and safety inspectors seek to secure
compliance with the law and may refer to this guidance as illustrating
good practice.
