P37

**Manual off-press cleaning**

**COSHH essentials for printers**

This information is intended to help employers in the printing industry comply with the requirements of the Control of Substances Hazardous to Health Regulations 2002 (COSHH), as amended, to control exposure to chemicals and protect workers' health.

It is also useful for trade union safety representatives.

This sheet describes good practice for off-press cleaning of cylinders, rollers, side panels, splash guards and other removable press components, in an extracted booth.

It is important to follow all the points or use equally effective measures.

Solvent-borne cleaners may be flammable.

**Main points**

- Dermatitis is common in printing. This is caused by frequent contact with chemicals used in printing processes.
- Minimise skin contact with inks and cleaning chemicals.
- Solvent-based cleaners (e.g., solvent naphtha) can be absorbed through the skin.

**Access and premises**

- Only allow authorised staff access to the cleaning area.
- Provide good facilities for washing, skin care, and for taking refreshments.

**Equipment**

- Can you use cleaning products with lower volatility/higher flashpoint?
- Minimise the risk of skin contact with ink - scrape parts as clean as possible before manual cleaning.
- Provide a good standard of general ventilation. Use powered wall- or window-mounted fans to supply fresh air - five to ten air changes per hour, with a through draught.
- Use an enclosed, extracted booth - see illustration.
- Provide chemical-resistant gloves.
- Use closed pump transfer for cleaning solvents.
- You need an airflow between 0.5 and 1 metre per second into the booth.
- Locate the booth away from doors, windows and walkways. Draughts may interfere with the extraction.
- Fit a manometer, pressure gauge or tell-tale to show that extraction is working.
- Discharge extracted air to a safe place in the open air, away from doors, windows and air inlets.
- Keep extraction ducts short and simple, and solvent- and fire-resistant.
- Provide a draining board in the booth, so parts can dry before they are removed.

**Special care**

- Skin contact with UV-curable inks can cause dermatitis.
Maintenance, examination and testing
✓ Follow the instructions in the maintenance manual - keep equipment in effective and efficient working order.
✓ Noisy or vibrating fans indicate a problem. Do repairs as necessary.
✓ If the machine extraction stops, or is faulty, get it repaired straightaway.
✓ Don’t alter, add or remove extraction without specialist advice.
✓ At least once a week, check that the extraction system and gauges work properly.
✓ You need to know the manufacturer’s performance specifications to know if extraction is working properly.
✓ If this information isn’t available, hire a competent ventilation engineer to determine the performance needed for effective control.
✓ The engineer’s report must show the target extraction rates.
✓ Keep this information in your testing logbook.
✓ Get a competent ventilation engineer to examine the extraction thoroughly and test its performance at least once every 14 months - see HSE publication HSG54.
✓ Keep records of all examinations and tests for at least five years.

Personal protective equipment (PPE)
✓ Provide storage for PPE to prevent damage or contamination when not in use.

Respiratory protective equipment (RPE)
✓ RPE may be needed when using some solvents in a larger booth, to reduce vapour inhalation.
✓ Provide a half-mask respirator and organic vapour filter with an assigned protection factor (APF) of 10 or more. See sheet P48.
✓ Ensure users examine their RPE thoroughly and test that it works properly every time they use it.

Gloves
✓ Use chemical-resistant gloves. Natural rubber latex (NRL) gloves, 1 mm thick, perform well for up to 30 minutes. Seek glove manufacturers advice for tasks that take longer than 30 minutes.
✓ Ensure that workers wear them.
✓ Ensure workers remove and discard damaged gloves.

Other protective equipment
✓ Eye protection.
✓ Impervious apron.
✓ Cotton overalls to minimise clothing contamination.
✓ Change contaminated overalls immediately and ensure they are laundered before reuse.

Skin management
✓ Skin contact with the chemicals may cause dermatitis.
Skin care
✓ Keep hands clean and in good condition.
✓ Using pre-work creams helps make removing chemicals easier. However, pre-work creams should not be seen as a substitute for gloves.
✓ If you need to use hand cleansers to remove ink, ensure that the cleanser is rinsed off afterwards.
✓ Provide after-work creams (moisturisers) to replace skin oils.
✓ Never allow solvents to be used for cleaning skin.

Skin surveillance/checks
✓ Consider seeking advice from an occupational health professional.
✓ Appoint a responsible person to carry out periodic skin inspections and record the findings.

Cleaning and housekeeping
✓ Keep the work area tidy, clean and free of combustible materials.
✓ Clean the workroom at least once a week.
✓ Minimise the amount of flammable liquids in use. Use a self-sealing container or proprietary dispenser.
✓ Store containers in a safe place, securely closed.
✓ Handle containers with care and replace caps.
✓ Clean up spills immediately. Use an impervious apron and new gloves. Throw away gloves once used.
✓ Keep ink, solvents and solid wastes out of the drains.
✓ Dispose of waste solvent, ink and empty containers as hazardous waste.
✓ Store contaminated cloths, wipes and gloves in fire-resisting, closed, metal containers. Dispose of them as hazardous waste.
✓ Use a contract laundry or a suitable equivalent to wash work clothing. Don’t do this at home.

Training and supervision
✓ Working in the right way is important for exposure control. Train and supervise workers - see details in sheet P0.

Environmental guidelines
Releases into the air may be regulated within the Pollution Prevention and Control (PPC) framework. Your local authority or the Environment Agency will tell you if PPC applies to your company, and give advice on air cleaning and discharging emissions to the air. In Scotland, consult the Scottish Environment Protection Agency (SEPA). For more information, see http://www.environment-agency.gov.uk/netregs/sectors/.

‘Health authorities and services’ for occupational physicians (doctors  
and nurses). Also see www.nhsplus.nhs.uk/.

Employee checklist

- Is the workroom ventilation switched on and working properly?
- Is the machine extraction switched on and working properly?
- Look for signs of wear and damage.
- If you find any problems, tell your supervisor or safety/employee representative.  
  Don’t just carry on working.
- Wear your protective equipment as directed.
- Check your RPE works properly every time you use it.
- Throw away protective gloves at the end of the job.
- Don’t use damaged gloves.
- Never use solvents to clean your hands - only use proprietary skin cleansers.
- Use skin creams provided, as instructed.
- Check your skin regularly for dryness or soreness - tell your supervisor if these  
  appear.
- Wash your hands before eating and drinking and before you leave work.
- Don’t smoke in the work area.

This guidance is issued by the Health and Safety Executive. Following  
the guidance is not compulsory and you are free to take other action.  
But if you do follow the guidance you will normally be doing enough to  
comply with the law. Health and safety inspectors seek to secure  
compliance with the law and may refer to this guidance as illustrating  
good practice.
