COSHH essentials for printers

This information is intended to help employers in the printing industry comply with the requirements of the Control of Substances Hazardous to Health Regulations 2002 (COSHH), as amended, to control exposure to chemicals and protect workers’ health.

It is also useful for trade union safety representatives.

This sheet describes good practice for digital (ink-jet) printing on machines more than 3.2 metres wide, using solvent-borne inks. Use extraction for solvent vapour.

It includes tasks such as printer-head cleaning and cartridge replacement.

It is important to follow all the points or use equally effective measures.

Main points

- Dermatitis is common in printing. This is caused by frequent contact with chemicals used in printing processes.
- Minimise skin contact with inks and cleaning chemicals.

Digital (ink-jet) printing

Access and premises

- Only allow authorised staff access to the press room.
- Provide good facilities for washing, skin care, and for taking refreshments.

Equipment

- Provide a good standard of general ventilation. Use powered wall- or window-mounted fans to supply fresh air - five to ten air changes per hour, with a through draught.
- Can you use automatic head cleaners?
- Provide extraction close to the printing heads and over wet areas of ink on the printed sheet.
- You need an airflow between 0.5 and 1 metre per second into the machine openings.
- Fit a manometer, pressure gauge or tell-tale to show that extraction is working.
- Discharge extracted air to a safe place in the open air, away from doors, windows and air inlets.

Maintenance, examination and testing

- Follow the instructions in the maintenance manual. Keep equipment in effective and efficient working order.
- Noisy or vibrating fans indicate a problem. Do repairs as necessary.
- If the machine extraction stops, or is faulty, get it repaired straightaway.
- Don’t alter, add or remove extraction without specialist advice.
- At least once a week, check that the extraction system and gauges work properly.
✓ You need to know the manufacturer’s performance specifications to know if extraction is working properly.
✓ If this information isn’t available, hire a competent ventilation engineer to determine the performance needed for effective control.
✓ The engineer’s report must show the target extraction rates.
✓ Keep this information in your testing logbook.
✓ Get a competent ventilation engineer to examine the extraction thoroughly and test its performance at least once every 14 months - see HSE publication HSG54.
✓ Keep records of all examinations and tests for at least five years.

**Personal Protective Equipment (PPE)**

**Respiratory protective equipment (RPE)**
✓ Respiratory protective equipment should not be needed for routine use.

**Gloves**
✓ Gloves are not needed for routine use.

**Skin management**
✓ Skin contact with the chemicals may cause dermatitis.

**Skin care**
✓ Keep hands clean and in good condition.
✓ Using pre-work creams helps make removing chemicals easier. However, pre-work creams should not be seen as a substitute for gloves.
✓ If you need to use hand cleansers to remove ink, ensure that the cleanser is rinsed off afterwards.
✓ Provide after-work creams (moisturisers) to replace skin oils.
✓ Never allow solvents to be used for cleaning skin.

**Skin surveillance/checks**
✓ Appoint a responsible person to carry out periodic skin inspections and record the findings.
✓ Consider seeking advice from an occupational health professional.

**Cleaning and housekeeping**
✓ Keep the work area tidy, clean and free of combustible materials.
✓ Clean the workroom at least once a week.
✓ Provide fire-resisting, metal bins with well-fitting lids to hold solvent-soaked cloths.
✓ Minimise the amount of flammable liquids in use. Use a self-sealing container or proprietary dispenser.
✓ Store containers in a safe place, securely closed.
✓ Clean up spills immediately. Use new nitrile gloves 0.4 mm thick. Throw away gloves once used.
✓ Store contaminated cloths, wipes and gloves in fire-resisting, closed, metal containers. Dispose of them as hazardous waste.
✓ Dispose of waste solvent, ink and empty containers as hazardous waste.
Use a contract laundry or a suitable equivalent to wash work clothing. Don’t do this at home.

Training and supervision

✓ Working in the right way is important for exposure control. Train and supervise workers - see details in sheet P0.

Environmental guidelines

Releases into the air may be regulated within the Pollution Prevention and Control (PPC) framework. Your local authority or the Environment Agency will tell you if PPC applies to your company, and give advice on air cleaning and discharging emissions. In Scotland, consult the Scottish Environment Protection Agency (SEPA). For more information, see www.environment-agency.gov.uk/netregs/sectors.

Contact the British Occupational Hygiene Society (BOHS) on 01332 298101 or at www.bohs.org for lists of qualified hygienists who can help you.

Look in Yellow Pages under ‘Health and safety consultants’ and ‘Health authorities and services’ for occupational physicians (doctors and nurses). Also see www.nhsplus.nhs.uk.

This guidance is issued by the Health and Safety Executive. Following the guidance is not compulsory and you are free to take other action. But if you do follow the guidance you will normally be doing enough to comply with the law. Health and safety inspectors seek to secure compliance with the law and may refer to this guidance as illustrating good practice.
