Slips, trips and falls shatter lives

Take action to stop slips, trips and falls in your workplace

Two new e-tools have been created to help you.

STEP is an e-Learning package providing slip and trip guidance. It is an easy way to learn about slips and trips, their causes, how to prevent them and why stopping them is important. You will find it useful whatever your level of expertise, and wherever you work. STEP contains all you need to train others. STEP is free to use online and is available on DVD for a small charge.

WAIT will help you choose the safest type of access equipment, if you need to work at height. It is especially useful if you are self employed or a manager or supervisor of a small or medium-sized enterprise. It is based on the information you provide, relating to the task you are carrying out.
