

**TIME TO  
CLEAR  
THE AIR!**

## ***Make sure your extraction is working!***

### ***Check that:***

- The extraction is working properly and controlling the dust
- If there is an airflow indicator, it is giving the right reading
- There are no unusual noises or vibrations
- There are no other signs of failing performance, eg smells, settled dust, visible escape
- The system has been tested and carries an up-to-date 'test' label

***If you are worried, tell your supervisor***
