APPENDIX 1	21

INTRODUCTION

1. This profile provides key statistics on safety and enforcement matters for the Paints and Coatings industry (as defined by Standard Industrial Classification 1992 Group 243 and 24620 (glue and gelatine) 1995/96).
2. The profile concentrates on details and trends for fatal, major and over 3- day injuries to employees in the paints and coatings industry, and makes comparisons with those found in the chemical industry as a whole for 2002/03 only. Comparisons cannot be made to previous years, as this is the first year that the paints and coatings industry sector profile has been produced.
3. Injury and dangerous occurrence figures in this report are based on injuries and incidents reported under the Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 1995 (RIDDOR '95). These Regulations came into force on 1 April 1996 and replaced RIDDOR '85. The definitions of injuries reported under RIDDOR '95 are given at Appendices 1 and 2.
4. As the number of injuries to self-employed people and members of the public in the paints and coatings industry is relatively low, the profile does not provide any great detail of these injuries, other than the summary data given in Table 1.
5. In 2002/03, figures showed there were 300 injuries to employees reported to all enforcing authorities for the paints and coatings industry (0 fatal injuries, 49 major injuries and 251 over 3-day injuries). The all reported injury rate for the paints and coatings industry was 1219.5 per 100,000 employees, higher than the rate of 861.8 for the chemical industry. See Table 2.
6. Information on enforcement action is also included in this profile.

EMPLOYMENT IN THE INDUSTRY

7. In 2002/03, the total employment figures for the paints and coatings industry consisted of around 24600 employees, 10.8% of the employment total for the chemical industry as a whole (228400 employees).

FATAL INJURIES (TABLES 1 AND 2)

8. There were 0 fatal injuries in the paints and coatings industry in 2002/03.

MAJOR INJURIES (TABLES 1 AND 2)

9. The number of reported major injuries was 49 in 2002/03. The major injury rate in the paints and coatings industry was higher, 199.2 (per 100,00 employees) compared to 173.2 in the chemical industry.

OVER 3-DAY INJURIES (TABLES 1 AND 2)

10. The number of reported over 3-day injuries was 251 in 2002/03. The over 3-day injury rate in the paints and coatings industry was higher than in the chemical industry, 1020.3 compared to 687.7.

INDUSTRIAL ACTIVITIES WITHIN THE PAINTS AND COATINGS INDUSTRY (TABLES 3 AND 3a)

11. Tables 3 and 3a show injuries and rates respectively from 2002/03 by SIC 92 group.
12. The more detailed breakdowns provided in most of the subsequent tables and figures are based on those injuries reported to HSE's Field Operations Directorate; Hazardous Installations Directorate, Land Division (formerly the Chemicals and Hazardous Installations Division); Nuclear Safety Division (for conventional safety) and local authorities.

KIND OF ACCIDENT (TABLE 4 AND FIGURES 1 AND 2)

13. The analysis of major injuries in the paints and coatings industry shows that the most common cause in 2002/03 was a slip, trip or fall on the same level, 18 (37%). The next most common type of injury was falls from a height, 10 (20.4%).
14. A comparison with major injuries in the chemical industry as a whole shows that slips, trips or falls on the same level accounted for 37% in the paints and coatings industry and 32% in chemical overall. The distribution of the most common kinds of major injury to employees in the paints and coatings industry, in comparison with those in the chemical industry as a whole in 2002/03, are shown in Figure 1.
15. The analysis of over 3-day injuries shows that injuries whilst handling, lifting or carrying were the most common cause in 2002/03, 112 (44.6%). The next most common type of injury was a slip, trip or fall on the same level, 56 (22.3%).
16. A comparison with over 3-day injuries in the chemical industry as a whole shows that handling accidents accounted for 44.6% in the paints and coatings industry and 38% in the chemical industry and were the cause of over a third of all injuries reported. Injuries caused by a slip, trip or fall accounted for 22.3% in the paints and coatings industry and 24% in the chemical industry. The distributions of over 3-day injuries for the paints and coatings industry are shown in Figure 2.

NATURE AND SITE OF INJURY (TABLES 5 AND 6 AND FIGURES 3 AND 4)

17. The analysis of major injuries in the paints and coatings industry shows that the most common were fractures to the wrist (9), foot (7), hand (6), upper limb (6) and lower limb (6). There was 1 amputation of a finger, and 2 dislocations to the upper and lower limbs. There were a total of 5 burns (3 to the eye, 1 to an upper limb and 1 to several locations). Major injuries occurring in the paints and coatings industry in 2002/03 are broken down by nature and site of injury in Table 3.
18. A comparison with major injuries in the paints and coatings and chemical industry as a whole shows that the proportion of fractures in the paints and coatings industry 81.6% was higher than that for the chemical industry 62.5%. Burns accounted for 10.2% in the paints and coatings industry compared to 13% in the chemical industry. Amputated fingers accounted for 2% in the paints and coatings industry and represented 4.8% of major injuries in the chemical industry. A percentage breakdown of major injuries by specific common nature and site combinations, together with comparisons for the chemical industry as a whole is shown in Figure 3.

19. The analysis of over 3-day injuries in the paints and coatings industry shows that the most common were sprains and strains to the back (67); lower limb (14) and upper limb (14). There were 47 contusions; 23 lacerations; 18 superficial injuries and 8 burns. Over 3-day injuries occurring in the paints and coatings industry in 2002/03 are broken down by nature and site of injury in Table 6.
20. A comparison with over 3-day injuries in the paints and coatings industry and chemical industry as a whole shows that the proportion involving burns was lower in the paints and coatings industry 3.2% compared to 7.3% in the chemical industry. Sprains and strains were the most common type of over 3-day injury in the paints and coatings industry, accounting for 51.8% of the reports received, proportionately higher than in the chemical industry 46.5%. A percentage breakdown of over 3-day injuries by specific common nature and site combination, together with comparisons for chemical as a whole is shown in Figure 4.

PROCESS ENVIRONMENTS (TABLE 7)

21. Table 7 sets out the actual activity causing injury at the time of the accident. Care must be taken in the interpretation of these figures as those activities and processes with the greatest number of attributed injuries may also have the highest levels of employment.
22. Of all reported injuries in 2002/03, general handling accounted for 10.6%, general storing for 7.3% and general maintenance for 5%. Of the specific chemical processes, filling and discharging was the most common cause of injury, accounting for 11 (3.6%) of all reported injuries. The mixing of chemicals (4) and the transfer of chemicals (4) caused 1.3% each of all reported injuries. However, 56% of all injuries were assigned to the category "other".

AGE AND SEX OF INJURED PEOPLE (TABLES 8A AND 8B)

23. There were 0 fatal injuries in the paints and coatings industry in 2002/03.
24. There were 49 major injuries in the paints and coatings industry in 2002/03. 39 were to male employees and 10 to female employees.
25. There were 251 over 3-day injuries in the paints and coatings industry in 2002/03. 225 were to male employees and 26 to female employees.
26. In addition to the breakdown by sex of injured person, Tables 8(a) and (b) also provides figures by severity of injury for various age bands in the pharmaceutical industry. The most common age group of male employees who suffered an injury was 40 - 44, with 25 - 29, being the most common amongst female employees.

INVESTIGATED INJURIES (TABLE 9)

27. Within the paints and coatings industry in 2002/03, 7.7% of major injuries and 16.7% of over 3 day injuries caused by contact with moving machinery were investigated.

DANGEROUS OCCURRENCES (TABLE 10)

28. Dangerous occurrences are certain kinds of incident, defined within RIDDOR, with a high potential to cause injury, and which are reportable whether or not that potential is realised. RIDDOR '95 updated the list of reportable dangerous occurrences. It includes general provisions as well as additional occurrences.
29. In 2002/03, the most common type of dangerous occurrence within the paints and coatings industry involved "the accidental release or escape of any substance in a quantity sufficient to cause the death, major injury or any other damage to the health of any person" (RIDDOR 95 – Ref Code 21). This type accounted for 50% of all reported dangerous occurrences within the paints and coatings industry.
30. The second most common type of dangerous occurrence within the paints and coatings industry was the "sudden, uncontrolled release of flammable substances" (RIDDOR 95 – Ref Code 20), which accounted for 31.25%.
31. There were three dangerous occurrences, which were the third most common type and accounted for 6.25% each. They were "failure, collapse or overturning of lifting machinery, excavator, pile driving frame or mobile powered access platform" (RIDDOR 95 – Ref Code 01); "failure of any closed vessel including boiler or of any associated pipework in which the internal pressure was above or below atmospheric pressure" (RIDDOR 95 – Ref Code 02) and the "...explosion or fire occurring in any plant or premises which results in the stoppage of that plant for more than 24 hours" (RIDDOR 95 – Ref Code 19).

ENFORCEMENT (TABLES 11 AND 12)

32. In the paints and coatings industry the number of enforcement notices (requirements) issued by HSE was 33 in 2002/03. Notices in 2002/03 consisted of 26 improvement notices, 6 immediate prohibition notices and 1 deferred prohibition notice. The number of notices issued in the paints and coatings industry in 2002/03 will be partially driven by the inspection initiatives chosen for the year, and may not follow a trend.
33. In 2002/03, the number of informations laid (prosecutions under individual breaches of legislation) for offences occurring in the pharmaceutical industry were 7.
34. In 2002/03, of the 7 informations laid for offences occurring in the pharmaceutical industry, 3 resulted in a conviction. The average fine imposed for these convictions was £9667.

TABLE 1: INJURIES WITHIN THE PAINTS AND COATINGS INDUSTRY REPORTED TO ALL ENFORCING AUTHORITIES, 2002/03

Year ^(a)	EMPLOYEES				SELF-EMPLOYED				MEMBERS OF PUBLIC			TRAINEE

NB – The major and over 3-day injuries for the pharmaceutical industry are extracted from CIS and FOCUS. Please note: We cannot identify FOCUS injuries that have been investigated, so the number of injuries investigated is based on CIS data only.

TABLE 10: DANGEROUS OCCURRENCES¹ REPORTED TO HSE IN THE PAINTS AND COATINGS INDUSTRY, 2002/03

Part 1	(Notifiable in relation to any place of work)	02/03						
1	Failure, collapse or overturning of lifting machinery, excavator, pile driving frame or mobile powered access platform.	1						
2	The failure of any closed vessel including boiler or of any associated pipework, in which the internal pressure was above or below atmospheric pressure.	1						
3	The failure of any freight container in any of its load-bearing parts while it is being raised, lowered or suspended.	0						
4	Plant or equipment either comes into contact with overhead electric line in which the voltage exceeds 200 volts or causes an electrical discharge.	0						
5	Electrical short circuit, which results in the stoppage of the plant for more than 24 hours.	0						
6	Unintentional ignition or explosion of explosives.	0						
7	The release or escape of a biological agent likely to cause human infection or illness.	0						
8	The malfunction of radiation generators.	0						
9	Failure of breathing apparatus in service.	0						
10	Failure of any lifting or life support equipment during a diving operation, which puts a diver at risk.	0						
11	Complete or partial collapse of scaffold over 5m high.	0						
12	Any unintended collision of a train with any other train or vehicle (other than one recorded in part 4 of this table), which caused, or might have caused the death of or major injury to any person.	0						
13	Incidents in relation to a well (other than a well sunk for the purpose of the abstraction of water).	0						
14	Incidents in respect of a pipeline or pipeline works.	0						
15	Failure of fairground equipment in use or under test.	0						
16	Overturning or serious damage to a tank while conveying by road prescribed dangerous substances, or the uncontrolled release or fire involving the substance being conveyed.	0						
17	Uncontrolled release or escape of a dangerous substance, or a fire involving the dangerous substance, when being conveyed by road in a vehicle.	0						
18	Collapse or partial collapse of any building or structure under construction involving over 5 tonnes of materials or any floor or wall of a building used as a place of work.	0						
19	An explosion or fire occurring in any plant or premises, which results in the stoppage of that plant for more than 24 hours.	1						
20	The sudden, uncontrolled release of flammable substances.	5						

Part 1	(Notifiable in relation to any place of work)	02/03						
21	The accidental release or escape of any substance in a quantity sufficient to cause the death, major injury or any other damage to the health of any person.	8						
41	The collapse of any storage bunker.	0						
43	An incident in which any person suffers an injury (not otherwise reportable under these regulations) which results from an explosion or from the discharge of any explosives for which he receives first-aid or medical treatment at the quarry.	0						
44	Any incident in which any substance is ascertained to have been projected beyond a quarry boundary as a result of blasting operations in circumstances in which any person was or might have been endangered.	0						
Total		16						

1 Full definitions of dangerous occurrences can be found in A Guide to the Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 1995.

(PERCENTAGE OF TOTAL INJURIES)**

APPENDIX 1

MAJOR AND OVER 3-DAY INJURY DEFINITIONS UNDER RIDDOR – REPORTING OF INJURIES, DISEASES AND DANGEROUS OCCURRENCES REGULATIONS 1995

MAJOR INJURIES

- a) Any fracture, other than to the fingers, thumbs or toes.
- b) Any amputation.
- c) Dislocation of the shoulder, hip, knee or spine.
- d) Loss of sight (whether temporary or permanent).
- e) A chemical or hot metal burn to the eye or any penetrating injury to the eye.
- f) Any injury resulting from an electric shock or electrical burn (including any electrical burn caused by arcing or arcing products) leading to unconsciousness or requiring resuscitation or admittance to hospital for more than 24 hours.
- g) Any other injury:
 - i) leading to hypothermia, heat-induced illness or to unconsciousness;
 - ii) requiring resuscitation; or
 - iii) requiring admittance to hospital for more than 24 hours.
- h) Loss of consciousness caused by asphyxia or by exposure to a harmful substance or biological agent.
- i) Either of the following conditions which result from the absorption of any substance by inhalation, ingestion or through the skin:
 - i) acute illness requiring medical treatment; or
 - ii) loss of consciousness.
- j) Acute illness which requires medical treatment whether there is a reason to believe that this resulted from exposure to a biological agent or its toxins or infected material.

OVER 3-DAY INJURIES

An over 3-day injury is an injury causing incapacity for *normal* work for **more** than 3 days.

APPENDIX 2

EFFECT OF RIDDOR 95 ON NUMBERS OF INJURIES AND DANGEROUS OCCURRENCES REPORTED IN 1996/97

Background to the change in regulations

Injury and dangerous occurrences statistics for 1996/97 and 1997/98p were compiled from reports made to HSE and local authorities under the Reporting of Injuries, Diseases and Dangerous Occurrence Regulations 1995 (RIDDOR 95), which came into force on 1 April 1996. There are a number of differences between RIDDOR 95 and the previous reporting regulations, RIDDOR 85. These changes resulted in substantial differences in the number of injuries and dangerous occurrences reported in 1996/97 compared with trends in previous years.

Keys changes under the new regulations

In 1996/97:

- Fatal, major and over 3-day injuries resulting from acts of physical violence at work became reportable;
- Acts of suicide or trespass which lead to a fatality on railways or other relevant transport systems became reportable;
- The list of reportable major injuries was simplified and expanded slightly. A number of additional injuries became reportable as major injuries, including fractures of the hand and foot and dislocations of the spine, knee, hip and shoulder;
- The definition of a non-fatal injury to a member of the public was changed. Any injuries caused by accidents arising out of or in connection with work activity which cause a person to be taken from the site of the accident to a hospital became reportable;
- The list of dangerous occurrences was expanded and made clearer.
